

ENEL4CB/ED/EP: Phase 2 Guideline – rev 3

In this phase, the student is tasked with the responsibility of developing the paper design (proposed solution showing evidence of alternate solutions/options, analysis, system and detailed design) for the project.

The Phase 2 oral and report are assessed by the academic supervisor and a 2nd examiner (internal/external).

In the Phase 2 assessments, the objective is to assess whether the candidate is on track. A report and “informal” presentation will be required.

The progress will be determined based on the following items:

Problem and Proposed solution:

- Does the candidate understand the problem of the project?
- What are the specifications for the project?
- Does the candidate have a proposed solution?
- Has the candidate looked at alternative solutions?

Feasibility study:

- Has the candidate made a study of the underlying concepts behind the project?
- Has the candidate identified the sources of information required and determined whether these sources are available?
- Has the candidate identified the most important tools or components required for the project and whether such items can be obtained within a reasonable time and within budget?

Analysis and design:

- Has the candidate performed any analysis, created any models and tested such models through experimentation or simulation?
- Has the candidate created a system design?
- Has the candidate created a detailed design?

Progress:

- Taking the above into consideration, can the student clearly indicate what remains to be done; and is it achievable in the remaining time and budget?

Some guidelines for the deliverables:

“Informal” presentation (you will meet your supervisor and internal examiner and present/discuss your project at a venue to be determined):

- 1) Discuss the detailed specification and associated performance metrics for the project.
- 2) Show the following clearly and as completely as possible.
 - a) What part of the specified work has been completed already.
 - b) What part of the specified work is still outstanding.
 - c) What has been done already in fulfilment of GA1, GA2 and GA3.
 - d) What is still outstanding for fulfilment of GA1, GA2 and GA3.

e) A timetable and work plan of tasks to be completed.

Report:

There is no official reporting standard in Phase 2. Please consult with your supervisor and discuss any specific reporting requirements he/she may require. Here are some suggestions for your report:

- 1) Abstract must adequately describe the main content and outcomes
- 2) The above presentation content (point 4 onwards) must be covered in the report
- 3) Maximum pages: at most 40 pages from Introduction to Conclusion.
- 4) All figures must be explained/discussed in the report
- 5) All tables must be explained/discussed in the report
- 6) Captions must be inserted beneath all figures and above all tables
- 7) All equations must be numbered; and numbers must be right-aligned
- 8) All paragraphs must be Full-justified (to the left and right)
- 9) All externally sourced information (including diagrams) must be referenced
- 10) All references must be cited.
- 11) No part of the source information should be converted into an image prior to inserting in report to defeat plagiarism checkers.
- 12) Turnitin (refer below) allowed for checking you have a suitable similarity – **Max. allowed similarity 18%**

Phase 2 weighting towards final mark: 20%

Design team
