

Guidelines for Disclosing AI Tool Use in Student Reports

Students must **disclose all uses of artificial intelligence (AI) tools** (e.g., Gemini, ChatGPT, GitHub Copilot) in the appendix titled "**AI Tool Use Disclosure**". This is a mandatory component of your report submission. Failure to properly disclose AI use will be considered a breach of academic integrity.

The AI Tool Use Disclosure Appendix

1. AI Tool Summary

For each AI tool used, provide a brief, high-level summary:

- **Tool Name and Version:** State the specific AI tool (e.g., Gemini Advanced, ChatGPT-4, GitHub Copilot).
- **Purpose:** Briefly describe the overall function the tool served (e.g., "Used Gemini to refine introduction structure," or "Used ChatGPT to generate code snippets for data analysis").
- **Scope of Use:** Estimate the extent of the AI's contribution (e.g., "Used for minor edits throughout the report," or "Used for specific code generation tasks").

2. Detailed Disclosure by Category

For every instance where you used an AI tool, you must provide a detailed explanation. Group your disclosures based on the categories below. If you used the same tool for multiple categories, list the details under the relevant heading.

A. AI as a Writing Tool (e.g., drafting, summarising, paraphrasing, editing, proofreading)

Requirement	Explanation
Specific Use	Identify the specific parts of the report and function (e.g., "Drafted the background section," "Refined paragraph structure in Section 2.1," "Proofread for grammar and typos").
Input/Prompt	Provide all prompts used to generate or modify the text. If you had an iterative conversation, provide the core prompt and a summary of all follow-up prompts.
Validation Process	Explain in detail how you verified the output. For example: "I cross-referenced all factual claims against three peer-reviewed sources," or "I manually re-wrote key sentences to ensure my own academic voice was maintained." Include full citations for all references used in the validation process.
Required Evidence	Include a screenshot of the original AI output , ensuring the date and time stamp of the conversation/response is clearly visible. Where applicable, include a 'diff' or tracked changes version showing the AI's suggestions vs. your final accepted text.

B. AI as an Idea Generation Tool (e.g., brainstorming, outlining, topic selection, structural design)

Requirement	Explanation
Specific Use	Identify the specific part of the work and function (e.g., "Generated initial design ideas," "Created a possible outline for the methodology," "Brainstormed potential solutions for the design challenge").
Input/Prompt	Provide all prompts used.
Validation Process	Explain in detail how you filtered, evaluated, and developed the AI-generated idea. For example: "I used the AI outline as a starting point but completely restructured the flow based on a logical progression of arguments," or "I discarded 8 of 10 AI ideas as unfeasible and developed the remaining two independently." Include full citations for all references used in the validation process.
Required Evidence	Include a screenshot of the original AI output containing the ideas or outline. The date and time stamp of the conversation/response must be clearly visible.

C. AI as a Code Generation or Development Tool (e.g., generating code snippets, debugging, explaining code, writing test cases)

Requirement	Explanation
Specific Use	Identify the specific code section, function, or task (e.g., "Generated a Python function for sorting data in Appendix A," "Debugged a segmentation fault in lines 45-52," "Wrote unit tests for the <code>calculate_metrics</code> function").
Input/Prompt	Provide all prompts used to generate or modify the code.
Validation Process	Explain in detail how you verified the code's correctness, efficiency, and security. For example: "I manually reviewed the generated function line-by-line against best practices and wrote five independent test cases to confirm correct output," or "I ran the AI-suggested fix and confirmed the bug was resolved without introducing new errors." Include full citations for all references used in the validation process.
Required Evidence	Include a screenshot of the original AI-generated code. The screenshot must clearly show the date and time stamp of the output. If the final code differs significantly, also provide a version showing the changes you made (e.g., a 'git diff' or tracked changes).

Formatting and Evidence Submission

- **Prompt Formatting:** Use an easily readable font (e.g., Courier New or a standard code font) for all prompts. Enclose prompts in **text blocks or blockquotes** to distinguish them from your explanatory text.
- **Evidence Standard:** All AI output must be provided as **screenshots**. These images must be clear, legible, and include the **date and time stamp** displayed by the AI tool's interface to verify the output's authenticity and timing.
- **Evidence Placement:** Ensure screenshots are directly related to the specific disclosure entry they support.
