

In this phase, the student is tasked with the responsibility of formal **problem identification** and is expected to **research the problem domain and potential solutions**. The identified problem and broadly specified potential solution(s) must be briefly described in the Phase 1 report that is assessed by the academic supervisor and 2nd examiner (internal/external (EL)).

Presently, there is no official reporting standard in Phase 1. Please consult with your supervisor and discuss any specific reporting requirements he/she may require.

Here are some suggestions for your report preparation/submission:

- 1) Abstract must adequately describe the main content and outcomes
- 2) Maximum pages: at most 5 pages from Introduction to Conclusion
- 3) The aim/objective and motivation for the project must be stated and supported by a relevant literature survey or review
- 4) The specifications for the project must be listed together with any constraints and assumptions
- 5) A feasibility study must be presented
- 6) Work plan should be shown, e.g. Gantt chart
- 7) All equations must be added using an equation editor and must include right-aligned equation numbering
- 8) All figures must be explained/discussed in the report
- 9) All tables must be explained/discussed in the report
- 10) Captions must be inserted beneath all figures and above all tables
- 11) All paragraphs must be Full-justified (to the left and right)
- 12) All externally sourced information (including diagrams) must be referenced
- 13) All references must be cited
- 14) No part of the source information should be converted into an image prior to inserting in report to defeat plagiarism checkers
- 15) Submission of report in .docx ONLY format. Submission link on Moodle.

Phase 1 weighting towards final mark: 5%
